

Elite Precast Concrete **case study**

Building a solid foundation with Legato® blocks from Elite Precast Concrete...

For more information or technical advice, contact 01952 588885.

At Elite Precast, we take pride in seeing our Legato® blocks at the heart of innovative construction projects across the UK. A recent collaboration between Jones Site Services & Installations and APC demonstrates how our products provide the perfect solution for robust, adaptable structures.

Jones Site Services & Installations were tasked with constructing a Legato® block retaining wall to form the bay wall for an upcoming Envirodome shelter. The project required a bay wall that was not only strong and durable but also quick to install with minimal disruption to site.

Why Legato® Blocks?

Our Legato® blocks are engineered for versatility and strength. Their interlocking design allows for rapid installation and reconfiguration, making them ideal for temporary or permanent structures, such as storage bays, retaining walls and industrial enclosures.

Building a solid foundation with Legato® blocks from Elite Precast Concrete...

A skilled team from Jones Site Services & Installations worked closely with APC, spending several days on-site to lay out and position the Legato® blocks with meticulous precision. The process involved...

Site Marking & Preparation

Accurate marking to ensure the wall's alignment and stability.

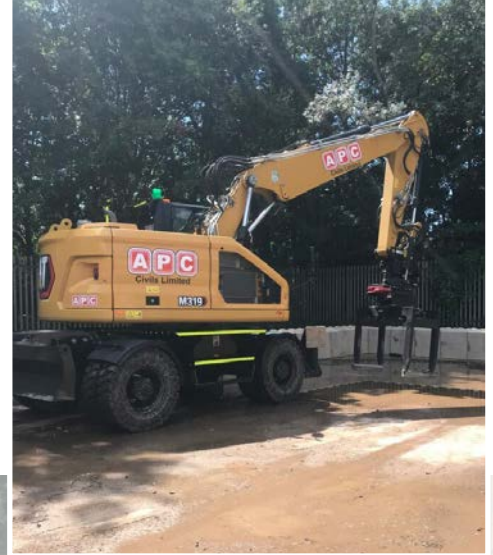

Block Placement

Careful handling and interlocking of each Legato block to create a seamless, sturdy barrier.

Quality Assurance

Ongoing checks throughout installation to guarantee a safe, reliable foundation.

The result was a perfectly executed Legato® block bay, ready to support the next phase of construction.

Jones Site Services & Installations brought extensive experience and a commitment to excellence, ensuring every block was placed with care.

Collaboration

Seamless teamwork between Jones Site Services, APC and Elite Precast resulted in a smooth and efficient installation process.

Sustainability

The use of Legato® blocks supports sustainable construction practices, offering flexibility for future site modifications or expansions.

Once the Legato® block storage bay was complete, the site installed the Envirodome shelter, successfully completing the project within the agreed time and cost agreement.
