1. These loading figures are for guidance only – if in doubt consult a structural engineer.

2. The retained material should be allowed to naturally fall against the wall as it is stacked.

3. These loading tables relate to specific materials with a typical density and angle of repose, stacked to specific heights and slopes.

4. The client should ensure that the walls are built on a suitable base.

5. The density and angle of repose of each material shown are typical values only.
