

Elite Precast Concrete **case study**

A secure and aesthetically pleasing, modular, retaining wall solution...

For more information or technical advice, contact 01952 588885.

When a local contractor, based in Woodfield Oaks, near the picturesque Worcestershire village of Ombersley, needed to build a retaining wall for his own home, it not only needed to be secure but it also had to blend in with the surrounding architecture.

As with all retaining walls their main function is to offer protection, usually from a mass of earth. However in this case the wall not only needed to be safe but also needed to look good. The choice of which retaining wall system to use was therefore very important to the client.

Both strong and aesthetically pleasing, Elite Precast Concrete's Vee-Rock™ modular, walling system proved to be the perfect choice.

A secure and aesthetically pleasing, modular, retaining wall solution...

Vee-Rock™ walling is ideal for private housing, housing developments, parks & gardens, industrial developments, retail parks and country estates, where both landscaping and strength are equally important.

One of the key features of Vee-Rock™ is the speed of construction (up to 70m² per day) which combined with the natural look makes this solution such a valuable alternative to traditional retaining walls or gabion baskets.

Available within just days of ordering, Vee-Rock™ is both quick and easy to install, which shortens project lead times and site programmes. It can also be laid in any weather, which is very useful when building in the UK.
